Tangram fun!

1) Place the 2 large triangles together so that they form a larger triangle with its point facing you and the flat end away from you.

2) Place the square along the top of the triangle, just to the left of the divide between the 2 large triangles.

3) 

Place the medium triangle on top of this row of shapes to cap off and complete the square.

With some practice you should be able to build the square in less than 15 seconds.
3) Place the small triangles on either side of the square so that they both lean into the square, like bookends.
